Improve Your Business Performance

Honeywell’s comprehensive portfolio of measurement and control products, combined with our software solutions and open interfaces for data access, enable you to manage your plant assets and optimize your enterprise by providing the bedrock system critical measurement, control and data acquisition. From the sensor to the control room—and everything in between—we can help you to improve your quality and productivity and reduce total costs.

The elements of a total control solution.
Networked or stand alone. We have them all.
Your Complete Provider

Versatile products that are easy to configure, easy to operate and easy to maintain.

Pressure Measurement
Honeywell’s modular SmartLine® pressure offering includes differential pressure, absolute pressure, gauge pressure, flange, remote seal and multivariable transmitter solutions with global agency and SIL certifications backed by an industry leading 15-year warranty.

Multivariable Measurement
SmartLine Multivariable Transmitters measure static pressure, differential pressure and process temperature with minimal process intrusions to provide reliable, accurate and stable mass flow measurement. Compatible with variety of flow elements and global engineering standards, they deliver superior performance for an accurate and fail-safe measurement even on low flow applications.

Temperature Measurement
Honeywell’s temperature transmitter offering, including SmartLine, has three tiers to provide the right mix of price and performance to meet different application needs. They are available in OEM packages and ready-to-install assemblies with globally accepted approvals, communications and diagnostics.

Level Measurement
SmartLine Level Transmitter allows reliable measurement of liquid level and interfaces in dynamic process conditions. The SmartLine Application Validation Tool eliminates model selection errors while providing fully pre-configured transmitters on site to reduce commissioning time.

Flow Meters
VersaFlow is a comprehensive portfolio of leading flow technologies which cover wide spectrum of applications across various industry verticals. They are easy to configure and use, providing safe, reliable and efficient flow measurement solutions.

Configuration and Device Management
A flexible suite of configuration and device management tools enable easy and reliable device configuration, monitoring, diagnosis and health management, for smart devices from Honeywell and other suppliers.

Analytical Instruments
Honeywell offers a broad line of advanced sensors and instruments for measuring pH, ORP, conductivity and dissolved oxygen. Unique Analytical solutions keep plant operations running, smoothly, efficiently and safely.

Controllers and Indicators
Honeywell single and dual loop digital controllers and indicators provide precise control and indication of process variables with a wide choice of functionality. With Honeywell’s complete line, we can offer a versatile solution for a variety of applications. All Honeywell controllers and indicators are highly reliable, easy to configure, flexible and versatile.

Programmers
Digital control programmers perform pre-determined processing or testing schedules on a time-versus-set point program. Honeywell offers programmers that perform basic to complex recipes and feature universal inputs, and multi-channel models.

Recorders and Data Acquisition
Honeywell offers a comprehensive portfolio for all of your recording and data acquisition needs. Choose your format: circular chart or paperless recorders for viewing, storing and managing your process data. In addition, Honeywell’s powerful software suite provides analysis, networking capability and real-time archiving.

Wireless Solutions
Honeywell provides a single wireless network which supports multiple industrial protocols and applications simultaneously. Wireless solutions are simple to manage and efficient to operate.

Modular Systems
A range of flexible automation and control solutions meeting the needs of many different industries like specialty chemicals, metals, water/waste-water and pharmaceuticals, while avoiding the overhead of complex, non-integrated automation systems.

Connectivity Solutions
OPC connectivity products and applications integrate Honeywell products with third-party SCADA, historians and human machine interfaces to provide secure, reliable open data connectivity.

Electric Actuators
With over 100 years in the control industry, Honeywell offers a portfolio of rotary actuators to control dampers and valves within your plant or mill, providing repeatability, reliability and reduced total cost of ownership.
Smart Pressure Transmitters

SmartLine Pressure Transmitters
Modular, accurate and robust for the lowest cost of ownership

SmartLine® Pressure Transmitters
Honeywell’s SmartLine pressure measurement system sets the standard for total performance in harsh process environments, featuring the industry’s most modular and robust pressure transmitters.

With better performance, modular construction, an advanced graphic display and the best integration features available when used with the Experion® control system, Honeywell helps facilities reduce project costs and startup time, avoid unplanned downtime, improve product quality, reduce spare parts inventory and shorten time to repair.

The SmartLine pressure offering has two performance tiers and comprises of absolute, differential, gauge, remote seal, flanged (level) and multivariable transmitter.

Salient features of SmartLine Platform:
• Universal terminals
• Field replaceable modules
• Dual seal compliance
• Temperature and static pressure compensation
• SmartLine Connection Advantage provides unique integration features such as Tamper Alerts, Transmitter Messaging and Maintenance Mode Indication
• Full compliance to SIL2/ SIL3 requirement

ST700 Pressure Transmitter
Smart performance at conventional prices.
• Suitable for monitoring, critical process control loops, and SIL2 safety
• Stability up to 0.02% span per year for five years
• Accuracy up to 0.05% of span
• Turndown ratios up to 100:1

ST800 Pressure Transmitter
The highest performance offering features:
• Suitable for critical process control loops, custody transfer and SIL2 safety
• Industry leading stability up to 0.01% span per year for ten years
• Accuracy up to 0.0375% of span standard and 0.025% span optional
• Comprehensive on-board diagnostic capabilities
• Response time as fast as 80 ms
• Turndown ratios up to 400:1
• 15 years warranty

SmartLine Accessories
Honeywell SmartLine pressure accessories include a wide range of manifolds in different configurations to suit pressure, differential pressure and level measurement. Honeywell manifolds come with built in safety mechanisms to ensure safe, reliable and efficient operations and easy maintenance of SmartLine Pressure Transmitters. These include block and bleed, 2-valve, 3-valve and 5-valve manifolds.

These are available as standalone parts or as a part of integrated and pretested assembly along with SmartLine Pressure Transmitters in order to minimize total cost of ownership for the users, original equipment manufacturers and EPC contractors.
Smart Multivariable Transmitters

SmartLine Multivariable Transmitters
Discover the smart power of 3-in-1: it is easy, accurate and reliable

SmartLine SMV800 Multivariable Transmitter

SmartLine SMV800 Multivariable Transmitter has the ability to calculate compensated mass or volume flow rate as a fourth process variable. Meter body-only components are also available to support third party and OEM metering solutions. In addition, it offers simple modularity, universal input for process temperature and advanced display with fail safe measurement helping users improve availability, reduce their inventory by up to 70% and maintenance cost by up to 30%.

It is compliant with the Experion® control system and HART7 providing the highest level of compatibility assurance and integration capabilities.

Key Features:
• Used to measure the flow of virtually any liquid, gas, steam or slurry for which a primary flow element exists to provide a differential measurement
• OEM Multivariable Pressure Transducers – measure both differential pressure and static pressure (absolute or gauge)
• Accuracies – up to 0.04% for differential pressure
• Accuracies – upto 0.2°C for temperature.
• Accuracies – up to 0.6% for flow
• Built in static pressure and temperature compensation
• Range ability – up to 400:1
• Compensated flow response time–up to 2x/sec
• Universal transmitter terminals
• Simple modular design
• Universal process temperature input option
• HART7/DE protocol support

With the addition of the SmartLine Multivariable Transmitter SMV800, the Honeywell SmartLine Pressure transmitter family now offers a complete range of absolute, differential, gauge pressure, including flanged and remote seal transmitters to suit every application need.

SmartLine Multivariable Transmitter leverages the proven SmartLine technology to measure three separate process variables by combining sensor technologies for static pressure, differential pressure and process temperature for air, gases, steam and liquids, with minimal process intrusions, lower total cost of ownership and superior performance for accurate and fail safe flow measurement.
Smart Temperature Transmitters

SmartLine Temperature Transmitters and STT 3000 Series
Precision devices, proven in the field

SmartLine STT850 and STT750 Temperature Transmitters
SmartLine STT850 and STT750 Temperature Transmitters are industry’s most reliable and robust temperature transmitters, featuring dual compartment housing and intuitive diagnostics for both the transmitter and the sensor. The availability of the dual input and digital output options minimize the number of instruments needed for both monitoring and switching needs, reducing the initial investment cost. SmartLine Temperature Transmitters feature the best stability with a drift specification of 0.01% of the URL per year for up to ten years. This superior performance reduces calibration frequency and lessens the need for periodic maintenance.

Same as the other SmartLine transmitters, the SmartLine Temperature Transmitters are modular in design, have universal terminals, advanced display and local configuration. As part of the SmartLine Connection Advantage, STT850 supports Transmitter Messaging, Maintenance Mode Indication and unique Tamper Reporting.

**STT170**
- Cost-effective, solution with 4-20 mA communications
- Universally PC programmable for both RTDs and thermocouples
- Available in single compartment housing
- Ultra compact size fits into the smallest DIN B head mount housing
- FF DTM Support

**STT250**
- Universal sensor inputs
- Compact size allows direct head mounting
- Available with integral engineering units meter
- Sensor matching function
- TÜV SIL2 certification

**STT800 Measurement Assembly**
An installation-ready temperature measurement assembly is offered with sensor heads, sensors, thermowells and process connections. It is available in short delivery cycles and comes with custom calibration and agency approvals. These have an exceptional level of support that provide ease of engineering, procurement and installation.

The assembly is offered in three models:
- Rigid probe assembly
- Threaded and socket weld thermo well assembly
- Drilled and flanged thermo well assembly
- ATEX, CSA, FM Approvals available on all the STT800 Assemblies

SmartLine STT650 DIN Rail Mounted Temperature Transmitter
SmartLine STT650 DIN Rail Mounted Temperature Transmitter offers high measurement accuracy, stability and reliability over a wide range of process and ambient temperatures. Designed and manufactured to deliver very high performance, the STT650 transmitter easily meets the most demanding needs for temperature measurement applications. The total accuracy level of the transmitter, including the ambient temperature effect in harsh industrial environments, allows the STT650 transmitter to replace virtually any transmitter available today.

Another great value is the dual channel options combined with the compact design that can help save over 40% panel space, lowering costs and inventory with it.

*STT850 only*
Smart Level Transmitters

SmartLine Level Transmitters
A new standard for total performance and user experience

- Document your selection process, and share it with others in the ordering process.
- Get your instrument fully preconfigured and ready for use in your application to shorten the commissioning time.

SmartLine SLG700 Level Transmitter is powered by innovative guided wave radar technology, which allows reliable and efficient level control in a wide range of industrial applications. The instrument sets new standards for total performance and delivers the following smart benefits:

- Eliminate poor production quality and false off process trips - obstacle immunity and dynamic false echo suppression algorithm's for highly complex tanks and variable processes.
- Maximize use of existing tank infrastructure for lower cost - blocking distance optimization maximizes installed accuracy in small tanks.
- Eliminate off-process measurement and production under highly dynamic process conditions/change-over - enhanced firmware with advanced co-relation algorithm for dynamic compensation.
- Increase the amount of actionable information through intuitive and advanced DTM technology.

Honeywell Transmitters are Recognized for Their Unsurpassed Performance and Accuracy:

- Accuracy: ±3mm or 0.03% of measured distance
- Repeatability: ±1mm
- Pressure range: -1 bar to 400 bar (-14 psi to 5801 psi)
- Temperature range: -60 to 450°C (-76 F to 842 F)
- Full scope of process connections:
  - Flanges starting from DN40 and 1-1/2 inch
  - NPT thread starting from 3/4 inch
- Wetted materials for corrosive environments: Alloy C-276 and SS316
- Resolution: 1mm
- 2-wire, 4-20mA loop power
- HART, Foundation Fieldbus output options
- Transmitter configuration write protection
- Unequalled local display capabilities
- Comprehensive on-board diagnostic capabilities
- Full compliance to SIL 2/3 requirements as a standard.

SmartLine SLG700 Level Transmitters
SmartLine Level Transmitter offers a new user experience from the start of using a new online tool or profiling the targeted tank application to the moment when the SmartLine Level Transmitter is installed and ready for measurement.

The SmartLine Application Validation Tool prevents costly errors upfront by validating the SmartLine Level Transmitter against the specified process tank. The tool interfaces to Honeywell’s order management system ensuring that the transmitter is built to the right specifications.

SmartLine Level Transmitter offers:

- Leading performance and user experience
- Unique features that lower your total cost of ownership
- Efficient control system integration

Honeywell’s SmartLine Level Transmitter comes with an intuitive and smart online selection tool to help you configure best instrument for your target application. This SmartLine Application and Validation Tool provides the following smart benefits, leading to lowest lifecycle cost:

- Use the built in logic of the tool and collaboration functionality to speed up the selection process and order an optimal instrument for your specific application.
Level Measurement

Non-Contact Radar
Stable level measurements that also deliver a low total cost of ownership

Non-Contact Radar Level Meter

1. Optional touch screen with 4-button operation
2. Two-wire level meter
3. Same housing for Ex and Non-Ex
4. One converter for all applications
5. Rotatable housing
6. Optional Metaglas barrier
7. Antenna extension (for long nozzles)

The Universal Radar Solution
The Non-Contact Radar (FMCW) is for level measurement of liquids and can be used to calculate for volume assessment. Non-Contact Radar provides a more stable measurement than pulse radar and they are well suited for agitated process conditions.

Highlights
- Standard accuracy ±3 mm (±0.04 in)
- Reliable measurement in difficult process conditions
- Operates up to a flange temperature of 200°C (390°F) and 40 barg (580 psig)
- Measuring range up to 80 m (260 ft)
- Long antenna versions can be extended to suit nozzle length
- Configuration software and HART DTMs included as standard
- Optional second current output
- Direct-accessible graphic touchscreen/wizard (option)
- Converter rotates 360°
- Triple barrier gas-tight protection available for working with dangerous gases (using pre-stressed fused glass)

Industries
- Chemicals
- Food & Beverage
- Iron, Steel and Metals
- Minerals & Mining
- Oil & Gas
- Petrochemical
- Pulp & Paper
- Water and Wastewater

Applications
- Tanks with agitators
- Process tanks
- Storage tanks

**Features**

- Resistant to acids and alkalis 250,000 units in operation
- Conductivity down to 1 µS/cm
- Temperature up to 180°C (356°F)
- Easy to select, fit and forget
- Available sizes: 0.1 to 80 inches (DN 2.5 - 3000)
- Various electrode materials available
- Standard liners: PTFE, PFA, ETFE, hard rubber and polyurethane
- Secondary pressure containment around sensor
- Pressure-resistant jacket up to 100 bar (1450 psi)
- 0.3 to 430,000 kg/h of flow
- Easily drained and easy to clean
- Excellent zero stability
- Rapid signal processing even with product and temperature changes and sudden changes in density
- Modular electronics concept and data redundancy–sensor and plug-and-play electronics easy to replace
- 2-wire device with integrated pressure and temperature compensation
- Non-wearing, fully welded stainless steel construction with high corrosion, pressure and temperature resistance
- Optimal process reliability thanks to ISP (Intelligent stable readings, free of external signal processing)
- Ready to use–plug-and-play
- Maintenance-free sensor design
- Pressure and temperature can be called up via HART
- Minimized uncertainty
- Easy sensor mounting
- Optimized reliability
- Installation wizard
- Minimal maintenance
- All in one system
- Efficient regreasing concept
- Portable configuration is available

**Applications**

- Suitable for all conductive applications
- From clean liquids to slurries and pastes with high solids content
- Abrasion, chemical and vacuum resistant
- Suitable for high temperatures
- Custody Transfer Applications
- Viscous or shear-sensitive products
- Products requiring low flow velocities
- In homogeneous mixtures
- Products with entrained solids or gas
- Flow and purity measurement
- Density, temperature and concentration measurement
- Custody Transfer Applications
- Superheated and saturated steam measurement
- Steam boiler monitoring
- Monitoring of compressor output
- Measurement of consumption in compressed air systems
- Measurement of consumption of industrial gases
- SIP and CIP processes in the food, beverage and pharmaceutical industries
- Measurement of conductive and non-conductive liquids
- Chemical addition
- Potable water
- General process control
- Purified water
- Broad range of refined hydrocarbons
- Sanitary flow rate measurements
- De-ionized and demineralized water
- Cooling water/district heating water

Wireless Solutions

Wireless Field Devices
Simple and efficient network that enables increased safety, reliability and efficiency

The Honeywell OneWireless™ Network is a multi-application network that can be tailored to offer the wireless coverage needed for industrial applications; from a simple field instrument network (ISA 100 Wireless) to a completely integrated, plant-wide multi-application network (Wi-Fi, ISA100 Wireless and WirelessHART). OneWireless Solutions offer several benefits beyond avoiding wiring costs such as helping customers optimize plant productivity, ensuring safety, meeting regulatory compliance and improving asset reliability. Supporting Honeywell XYR™ 6000 wireless transmitters and the Honeywell OneWireless Adapter, this network delivers a global solution with robust security, predictable power management and multi-speed monitoring. Attributes and benefits include:

- Single plant wide wireless infrastructure for lowest total cost of ownership
- Open, standards based system providing choice of product and supplier
- Best integrated industrial security available today
- Extremely reliable mesh system—field proven for best uptime
- Flexible and scalable for designing the network that best fits the application need

OneWireless XYR 6000 Transmitters

OneWireless XYR 6000 Transmitters provide highly accurate pressure, temperature, analog input, valve position, digital input measurements or a digital output, and transmit the measured value wirelessly using the 2.4 GHz ISM band and ISA100 Wireless open protocol to a Honeywell access point. XYR 6000 transmitters provide the ability to obtain data from remote and hazardous measurement locations without the need to run wires.

OneWireless Adapter

The OneWireless Adapter (OWA) transforms a HART device into an ISA100 Wireless compliant wireless device, transmitting this valuable information back to a host system wirelessly. The OWA provides access to: 4 HART dynamic variables (PV, SV, TV, FV), multivariable data, calibration and diagnostic information, device configuration parameters.

XYR 3000 Wireless Multiplexer I/O, Modems and Gateways

Honeywell XYR 3000 products provide a simple and reliable means of implementing a wireless solution for applications with high-density I/O concentrations, providing the lowest cost per wireless measurement point, enabling new applications. Gateway and modem products provide wireless interfaces between data buses such as Ethernet, RS232 and RS485.

Software Tools

Configuration and Management Tools
Trouble-free and reliable device management

SCT 3000 Smartline Configuration Toolkit
Smartline Configuration Toolkit is a PC-based engineering and maintenance tool designed specifically for use with Honeywell’s family of smart field devices based on the DE protocol.
- Access to configuration database parameters
- Verifies all parameters are correct
- Enables “Management of Change”

Field Device Manager Express
Field Device Manager Express software is versatile and flexible, enabling process plant engineers and operators to perform on-the-go smart device maintenance anywhere in the plant. It operates with Windows™ 7 laptop or desktop operating systems and is used for managing and configuring smart HART and Profibus field instruments.
- Provides full access to device parameters, configuration wizards, diagnosis procedures
- On-line and off-line device configuration and maintenance information support using both EDDL and DTM technologies
- Simplifies commissioning and maintenance with an easy-to-use interface for common tasks
- Automatic device discovery
- Provides device history as a way to easily compare today’s configuration with last week’s or last month’s known setup

Honeywell MC Toolkit
The MC Toolkit handles multiple communication protocols, letting you configure, monitor, diagnose, and manage smart devices from Honeywell and other suppliers. This handheld configurator is available in intrinsic as well as non intrinsic safe versions suitable for usage in safe as well as hazardous areas.
- Configures both DE and HART protocols and provisions Honeywell ISA100 Wireless devices
- Automatically verifies device identification and database configuration
- Provides full self-diagnostic and device diagnostic support
- Configures any HART device with a published HART Device Descriptions (DD), regardless of device manufacturer

SmartLine Anytime Tool
SmartLine Anytime Tool allows to upgrade firmware of SmartLine instruments in the field. Easy to use and intuitive, the tool enables the SmartLine platform’s promise to:
- Save time on repair and maintenance
- Upgrade instrument to the latest firmware, to take advantage of additional functionality
- Lower the inventory of spare modules

Honeywell’s software tools help users configure, install, manage and maintain smart field devices efficiently. All products are intuitive and feature rich and easy-to-use interfaces for plant maintenance engineers, managers and instrument technicians to manage field devices.
Analytical Instruments

Smart Sensors
Unique measurement technology

Hydrogen Purity Concentration
The principles of thermal conductivity are used to determine the concentration of a specific gas in a binary gas mixture. This measurement is used to determine the concentration of the coolant and purge gases (H₂ and CO₂) used on start-up and operating cycles on hydrogen cooled turbine generators.

- Low Drift Reduces Need for Frequent Calibrations
- Rapid Response Provides Immediate Indication of Process Changes
- Time Proven, Reliable Measurement Ensures Safe Start-up and Operation
- On-line Measurement Helps Increase Efficiency and Save Operating Costs

Meredian® Glass pH and ORP Electrodes
Honeywell’s traditional glass sensor electrodes offer time proven reliable pH measurement for selected applications. Designs include combination electrodes, as well as separate measuring and reference electrodes.

- High Purity Water Assembly for Accurate pH Measurement in Low Conductivity Sample
- Separate Measuring and Reference Electrodes Lowers Replacement Costs
- Platinum and Gold Electrodes for Accurate Measurement of ORP

High Performance HB and HBD pH and ORP Series
Unique, rugged reference technology extends the lifetime in harsh process applications. This saves on maintenance and replacement costs.

- Durafet non-glass electrode option with HBD Series
- Prevents Sensor Poisoning
- Prevents Internal Leaks and Plugging
- Allows Extreme Temperature and Pressure Tolerance
- Allows for Long Life in Low and High pH Applications

Durafet® pH Electrodes
Honeywell pioneered innovative pH measurement with the first industrial, non-glass, ISFET (Ion Sensitive Field Effect Transistor) based pH sensor—the Durafet pH electrode.

- Waterproof Vario Pin Connector Options
- Rugged Non-glass Design Lowers Replacement Costs
- Long Term Stability Reduces Calibration Frequency
- 3-A Sanitary Design for On-line pH Measurement in Food & Dairy

DL5000 Dissolved Oxygen
Accurate and stable dissolved oxygen measurements can be made using Honeywell’s unique equilibrium probe technology. This unique technology provides excellent performance in low parts per billion (ppb) as well as parts per million (ppm) applications.

- Unique Equilibrium Probe Technology
- No Replacement of Membrane, Electrolyte or Electrode
- Unaffected by Fouling
- Not Flow Sensitive

Unique Innovations
Honeywell is an industry proven leader for analytical products and solutions with unique technologies.

Innovations in analytical measurements lead to more reliable systems, lower total cost solutions and safer environments. This results in process control that maximizes up-time and minimizes cost to add to your bottom line.
UDA2182 Series Analyzers

The UDA2182 Series is a versatile, dual or single input analyzer that measures pH, ORP, contacting conductivity and dissolved oxygen. The "mix-and-match" input design offers the user flexibility for a wide range of applications. Its common form, fit and function to older Honeywell analyzers make it a quick and easy retrofit into existing panels and installations.

- Versatile Multiple Input Analyzer
- Mix and Match Process Measurements
- Entire Status at a Glance—Graphic LED Display
- Fast and Easy Commissioning—Even Wireless Configuration
- Remote Monitoring Using Web Pages
- Single or Dual Input for pH, ORP, Contacting Conductivity or Dissolved Oxygen
- Dual Input in any Measurement Combination
- PID Control Option
- Up to 3 Analog Outputs
- Up to 4 Alarm Relays
- Backlit Graphical LED Display
- Type 4 Case
- Infrared PC and Pocket PC Configuration
- FM/CSA Class 1, Div 2 Approval
- Event History Log
- Real Time Clock
- Auto Clean/Auto Calibration Functions
- Ethernet/Modbus Communications
- Eastern European Languages

pH Input

The pH input will accept a wide variety of sensors—non-glass Durafet®, HB high performance pH series and traditional glass Meredian® electrodes, ORP combination electrodes and the HPW700 high purity system. In addition to the basic unit the pH input has:

- Auto Buffer Calibration
- High Purity Water Solution Compensation
- 0.2 sec Update Rate for Fast Responding Durafet pH Electrodes

Conductivity Input

The conductivity input will accept signals from Honeywell’s standard selection of contacting conductivity cells. The conductivity unit also has:

- Temperature Compensation Curves
- Calculation of % Rejection/Passage and Difference of Two Cells
- Conversions to ppm, ppb or ppt Total Dissolved Solids (TDS)
- CO₂ Concentration Algorithm
- pH from Differential Conductivity

Dissolved Oxygen Input

The dissolved oxygen input is from Honeywell’s unique equilibrium probe. It has these additional features:

- ppm or ppb Measurement
- Automatic or Manual Calibration
- Ambient Temperature and Atmospheric Pressure Compensation
Analytical Instruments

**pH/ORP**

Improved accuracy to optimize your process

A range of analyzers and transmitters for use with Honeywell glass and non-glass sensors and mountings to measure pH and ORP. Included in this offering is the Durafet pH electrode, the only industrial, solid state pH electrode on the market.

For sanitary applications in the food and dairy industries, the Sanitary Durafet is authorized to use the 3A symbol. For pure water applications, the HPW7000 Hi-pHurity pH measurement system guarantees a 0.1 pH accuracy in water samples with conductivity less than 10 uS. All the below mentioned measurements can be used in process, wastewater and pure water applications.

These analyzers/probe systems determine the levels of dissolved oxygen in water. The patented equilibrium dissolved oxygen probe design is unaffected by inert fouling or changes in flow conditions. The system’s analyzer/controller measures either ppb DO levels in power plant and semiconductor applications for corrosion detection or deaerator efficiency or ppm DO levels in wastewater, environmental and process applications for control and compliance.

### 7866 Digital Thermal Conductivity Analyzer

The 7866 Thermal Conductivity Analyzer is designed to provide a highly sensitive and accurate analysis of a binary (2-component) mixture of gases. The analyzer can also be calibrated to measure a single component of a multicomponent gas mixture, providing the background gases constitute a stable mixture (such as air), or have approximately the same thermal conductivity. It uses the principles of thermal conductivity, to determine the concentration of a sample gas through the measurement of thermal losses from two highly stable, matched thermistor probes inserted in a stainless steel block.

### Thermal Conductivity

A thermal conductivity system that measures concentrations of hydrogen purity and CO2 gas. This measurement is typically made in hydrogen-cooled generators.

- Easy to use prompts
- Security code protected
- Reliable solid state design
- High speed of response
- High sensitivity
- Excellent stability
- Low maintenance requirement
- Low installation costs through optional remote mounting capability of the sensing unit (transmitter)
- Explosion-proof housing on the sensing unit available for Class1, Div1 areas
- Signal transmission from the sensing unit up to 1000 feet over unshielded lead wires
- Panel-mounted 1/4 DIN control unit with easy-to-read display
- Current output signal from the control unit representing measured PV
- Single or dual alarms
- A triple range analyzer for hydrogen-cooled generator applications is available
- Optional Modbus communications supports configuration and data acquisition

Honeywell Controller Value
Every Honeywell Controller, Programmer and Indicator offers you the best price/performance ratio compared with any competitive instrument in its class. Our complete line is engineered to provide you with “targeted functionality” – solutions tailored to your specific process control requirements—so you only buy what you need.

- Clear and informative operator interface
- Easy to setup and operate
- Straightforward installation and maintenance
- Single-button turning for precise control
- Fuzzy logic overshoot suppression
- Unsurpassed quality and support

Process Instrument Explore (P.I.E.) Software
P.I.E. is a PC based, intuitive software program that runs on a Pocket PC, desktop or laptop. It can be used either online or offline to create UDC2500, UDC3200 and UDC3500 configurations. Configurations can be easily downloaded to the controller via its communication or infrared port.

Infrared Communication Port
Each UDC2500, UDC3200 and UDC3500 has an infrared communications port that provides a non-intrusive connection to the controller while maintaining Type 4X and IP66 integrity. You can duplicate an instrument’s configuration, obtain maintenance information just by pointing your IR interface device in the direction of the instrument.
Programmers and Indicators

Circular Chart Recorders

Honeywell Circular Chart Recorders are preferred for batch processes. The circular chart record displays the entire batch operation over a specific unit of time, from one hour to 31 days. An additional advantage of the circular chart record is easy filing and copying for reference. Compared to the strip chart record, the circular chart has a shorter calibrated chart width.

Recorders and Data Acquisition

Paperless Recorders and Data Acquisition
Experience the flexibility, security and networking capabilities of Honeywell’s paperless recorders

TrendManager Software Suite
TrendView’s reliable paperless recorders and software makes recording easier and the data more accessible to improve decision making. The TrendManager Software Suite includes the standard TrendViewer software package; the TrendManager Pro advanced data analysis and archiving software; the TrendServer Pro fully network aware software for communications with recorders; and the Screen Designer software for creating customized screen layouts. This low-cost, flexible, easy-to-use software suite sets the “trend” recorders apart from all the others.

The Paperless Advantage

**Easy to Use**
Dedicated display keys and full screen menus allow operators to quickly access and interpret information.

**Improved Decision Making**
On-line data analysis allows fast operator response during process upsets.

**Meets Documentation Requirements**
Permanent archived records of process and configuration data can be stored to disk and easily replayed on the recorder or personal computer using the data analysis software.

**Easy to Operate and Maintain**
Reduced maintenance costs, elimination of consumable pens and paper and increased reliability since mechanical print assemblies have been eliminated.

**Easy to Own**
Paperless recorders offer significant improvements over traditional paper recorders. Their inexpensive storage media and full-color LCD display reduces operating costs and improves data analysis. The lack of vulnerable print mechanisms and other mechanical parts improves reliability.

**Easy to Network**
Products can be connected directly to the Local Area Network (LAN) via Ethernet using Modbus TCP/IP protocol. Using the LAN, multiple departments can access these instruments for real time data acquisition.

TrendViewer
- View, graph and print stored data
- Print configurations and process data

TrendManager Pro
Industry leading PC based data analysis package that support:
- Importing data from any recorder
- Importing data from any Honeywell solutions such as DPR180, DPR250 and HC900 controller
- Archiving data
- Multi-level, multi-user passwords
- Graph, plot & export data across any recorder, pen or time frame
- Audit trails
- Configuration of recorders
- Batch recorder management
- Export data files in CSV format

TrendServer Pro
Industry leading PC based communications software to network your recorder:
- Handles client/server architecture
- Schedule downloads of recorder data (FTP transfers)
- Remotely configure recorders
- Real time data acquisitions
- Communicate via RS485 and/or Ethernet
- Integrated OPC Server support
- Modbus, FTP, web browser
- Batch Report Tool
- IQ/OQ Protocol Tool

Database Management Tool
Provided with TrendServer Pro
- Provides safe administration of data
- Archive, sort, move, copy or delete data in local or remote database
- Use tree structure for easy understanding of where files are located
- Data viewed by recorders or monthly archive
- Allows storage of data to secure server

Screen Designer
Custom displays to exactly suit your application
- Total design flexibility to produce customized screen layouts
- Design the screen that will best monitor your process
- Includes bitmap picture input for easy process understanding

Tools
- AMS2750D Report Tool
- Generate Survey Reports
Scalable Control Solutions

**ControlEdge™ PLC**
Secure connectivity and tight integration to devices from multiple vendors - with easy configuration, efficient operations, and reduced maintenance.

Honeywell’s advanced Programmable Logic Controller (PLC) technology improves control performance while offering greater flexibility and lower costs. The new ControlEdge™ PLC improves integration with Experion®, HMI s and third-party devices, and reduces configuration efforts by utilizing the industry-accepted IEC 61131-3 programming languages, as well as remote configuration and firmware updates.

Honeywell’s ControlEdge Programmable Logic Controllers (PLCs) provide robust control in a wide range of discrete applications. This advanced line of controllers, compliant with the IEC 61131-3 standard, offers impressive scalability for different environments.

**Key Highlights**
The ControlEdge PLC is based on the proven 900 platform of racks and power supplies, currently used by HC900.
- First PLC with Universal I/O for greater configuration flexibility
- Designed and developed by Honeywell, a global leader in process automation for more than 40 years
- Tightly integrated with Experion, Honeywell’s best-in-class Distributed Control System (DCS), Supervisory Control and Data Acquisition (SCADA) system, and safety system
- Native controller redundancy
- Optionally redundant power supplies
- Two variants of power supplies: 60W 24VDC and 110/240VAC
- Leverages Honeywell’s LEAP project methodology and Universal I/O for greater configuration flexibility
- I/O racks of various sizes
- Integration with third-party systems and devices such as motors, drivers, and compressors
- Connects to Human-Machine Interface (HMI) through Modbus and OPC UA protocols
- Compatible with leading open network standards such as Modbus and OPC UA
- Powerful IEC 61131-3 programming environment
- Best-in-class cyber security ensuring the safety of the system, personnel and critical information
- Single vendor service and support across PLC, DCS and Safety

**Superior Integration Capability**
With Honeywell technology, industrial sites have a flexible way to efficiently access data in a seamless manner, ensuring easy configuration and maintenance. ControlEdge PLCs are tightly integrated with the Experion control system architecture. By partnering with an automation vendor offering both DCS and PLC solutions, users have a single point of contact for support and supply chain, substantially reducing CAPEX and OPEX.

**Universal I/O for Project Flexibility**
Honeywell’s automation experience and innovative LEAP methodology are the key to increased flexibility - allowing industrial firms to optimize project execution. With LEAP, companies can realize significant capital savings on the total installed automation costs of a project, reduce rework costs, and minimize schedule delays.

Essential to the LEAP approach is the implementation of 16-channel Universal I/O modules (UIO), which offer flexibility in I/O type, eliminating the need for custom PLC hardware alignment with different I/O configurations. Any field signal can be connected to any I/O channel. Deployment of UIO provides greater flexibility for late stage changes, such as configuration and design changes on a typical automation project.

The UIO module reduces equipment needs by reducing or eliminating marshalling, and because there is no need for hardware with different I/O configurations. The result is significant savings in spares inventory and associated costs.
Embedded OPC UA Protocol
As the protocol of choice for IIoT, OPC Unified Architecture (UA) provides secure, reliable and vendor-neutral transport of raw data and pre-processed information from the sensor and field level up to the manufacturing level. Utilizing this open protocol – embedded directly in the controller itself as a client and a server – Honeywell’s ControlEdge PLC provides users with the flexibility to choose between interfaces while simplifying integration with a wide range of third-party systems and devices.

Controller Redundancy
Honeywell’s redundancy is ready to go. There is no need to program any differently from a non-redundant controller. ControlEdge PLC takes away the complexity. No additional infrastructure is required to synchronize the data between CPMs.

Robust Cyber Security
Our embedded cyber security supports compliance, reduced risk, and availability. Features include secure boot to prevent uploading of unauthorized software, a built-in firewall to reduce exposure to denial-of-service attacks and message flooding, encryption for critical data with easy configuration, and authentication and authorization through a trusted certificate and robust item subscription model.
Scalable Control Solutions

Experion Solutions
Scalable solutions for diverse control requirements

Experion LX
Experion LX is a proven, easy to use and purpose-built distributed control system. Experion LX manages all continuous process control applications and optimizes batch and sequence-oriented applications. Experion LX incorporates Honeywell’s latest C300 controller technology and an innovative Series 8 I/O platform.

Benefits:
- Maximize plant uptime and reliability
- Optimize process efficiency
- Boost plant performance and agility to meet business challenges
- Enhance operator effectiveness through alarm management and displays
- Communicate effortlessly with third-party devices and drives
- Reduce OPEX through a low total cost-of-ownership
- Ensure control system scalability and future expansion

Experion HS SCADA Systems
Experion HS is a powerful software platform that incorporates innovative applications for human machine interface applications (HMI) and supervisory control and data acquisition (SCADA). Built upon the proven technologies of the Experion platform, Experion HS is an integrated and affordable solution for smaller unit operations.

Features:
- 500 plus pre-built displays
- HMI including pre-built displays
- On-board historian and trending
- Alarm and event subsystem
- Reports
- 15 dual-window client stations
- SCADA support for a wide variety of devices
- OPC Suite and open standard communication protocols
- eServer for casual browser view

Experion® LX Architecture
Scalable Control Solutions

MasterLogic Programmable Logic Controllers
Greater versatility, easier engineering

Advanced Technology—Available at a Competitive Cost
MasterLogic’s advanced technology enables higher speed processing and better control in applications of all types, particularly smaller unit operations. This compact and modular PLC offers all of the redundancy architecture options needed for most industrial operations—and at a competitive cost. A versatile family of I/O modules and networking options offers flexibility in how MasterLogic fits into an entire automation scheme.

Available through Honeywell’s expansive global organization, the MasterLogic PLC features:
• Powerful and versatile processors for high-speed applications (provides 42 ns/step, 7 MB program memory, 4 MB system memory, 2 MB data memory and 16 MB built-in flash memory for program and data backup)
• Full redundancy for CPU, power and network
• Compact pocket-size modules to optimize space
• IEC61131-3 standard programming with LD/SFC/ST/IL language options
• Vast library of standard function blocks and support for creating new or user-defined function blocks
• Over 50 types of I/O modules including High Speed Counter and Sequence-of-Event modules
• Open network protocols with field devices (Profibus DP, DeviceNet, HART, “Modbus TCP/RTU/ASCII”) and user-defined frame option
• Open communication with external systems through 10/100Mbps fast Ethernet and serial RS232C/RS422
• Peer-to-peer communications between PLCs with either dedicated 100 Mbps Ethernet or fiber-optic
• Hot swapping, online editing, user-defined interrupt programs
• Integration with Experion PKS, Experion HS, or Experion LX architecture and SCADA systems
• Self-diagnostics including network diagnostics, system logs, auto-scan and system monitoring
• Program simulator to test programs offline without PLC/CPU

The MasterLogic PLC is a powerful and scalable rack-based programmable logic controller. It can be installed in either a stand-alone or distributed architecture. A range of CPUs, power supplies and different rack sizes are available, to meet the requirements of a broad range of applications.

Honeywell’s Integrated Approach
MasterLogic is much more than just a better PLC; it comes from a company focused on the “system” of automation—not just the parts. Honeywell has always thought about automation problems in their entirety. Its holistic systems strategy, first developed in the 1970s with the introduction of the distributed control system (DCS), supports an integrated architecture with unified sensing, control, operations and information management.

The various elements of a plant automation system can be installed, started and operated together in a prepackaged manner without excessive tuning and adjustment by the implementation project engineer. Hardware and software components continue to operate with high reliability because they were engineered to be compatible. And when it’s time to expand or upgrade the system, that task is made easy as well.

The core aspects of Honeywell’s systems include:
• Standard displays, faceplates and detail displays that provide a consistent look and feel to operators even when used with non-Honeywell controllers
• Embedding of MasterLogic alarms and events into the Experion HS alarm and event sub-system, including Sequence of Event information
• Critical functionality unifying the real-time, process-connected world of the controller with graphical user interface (GUI) and plant supervisory functions such as monitoring and alarm management
• Data management functions that derive from history collection and reporting
HC900 Controller
The HC900 offers an integrated solution that provides a single flexible system for process control and safety with faster start-up time, common engineering tools, reduced training, simplified training and low cost of ownership. The combination of analog control loops, setpoint programs, function block configuration, data acquisition and an extensive assortment of predefined analog and digital blocks make the HC900 the ideal choice for thermal processing, water treatment, food & beverage processing, power generation, pharmaceutical, manufactured goods, semiconductor industries and other safety related applications such as burner management systems, combustion control, pipeline monitoring, spill prevention, and emergency shutdown.

The rack-based HC900 is a modular, scalable platform available in 3 rack sizes (4, 8 and 12 I/O slots) and three CPU performance choices to handle a wide range of automation requirements. The CPU options available for the HC900 Controller include ones for non-redundant applications, redundant networking and for both redundant CPU applications and redundant networking. To maximize installation flexibility, up to 11 additional remote I/O racks may be connected to a single controller to reduce wiring and installation costs.

The versatile HC900 Controller is the perfect solution for unit control requiring integrated loop and logic processing. It is also the ideal data acquisition package with up to 1152 universal analog inputs, extensive math and free form calculations. Intuitive function block software allows you to quickly get up and running, saving you time and money. Ethernet Open Connectivity simplifies plant network integration. Redundant CPU’s, Power Supplies and Networks maximize process uptime.

The HC900 consists of three components: a powerful controller (either process or safety) with modular I/O, a hardened operator interface with color display compact flash card (4GB), and intuitive configuration software. The HC900 system is also available with similar hardware that is TUV certified for safety applications.

Controller:
- Modular I/O design
- Multiloop PID Control
- Setpoint programmers, scheduler
- Process logic, timers, counters
- Process algorithms, calculations
- Universal analog inputs
- Stores setpoint profiles, recipes
- Remote Terminal Panels (RTP)
- Redundant CPU’s, power supplies

Control Designer Software:
- Drag and drop soft wiring of function block objects
- Load configuration via Ethernet, serial communication modem
- Graphic hard copy records
- Load/upload, monitor configuration via modem
- Database export in CSV or TAB DELIMITED formats

The HC900 Process and Safety Control System is:
- High Performance - enhances quality
- Easiest to Use and Engineer- improves productivity
- Low Total Cost of Ownership - maximizes profitability

Operator Interface

The 900 Control Station operator interface from Honeywell compliments the HC900 Controller with a unique combination of predefined display features and custom display development tools to deliver ease of use and high flexibility in an efficient and affordable package. The color display and finger touch user interface enhances process monitoring while simplifying online controller changes. The Station Designer software used to configure the interface works in conjunction with the HC900 Process Controller configuration software to automatically build a Control Station database that exactly matches the unique, user configured, controller database. This highly integrated operation eliminates the time consuming task of assigning controller communication register addresses to the operator interface parameters used to build displays. The standard database of the Control Station allows all available controller tags to be imported without restriction or costly price adders, eliminating the risk of running out of tag resources in the middle of your project. The hardware of the 900 Control Station is designed to handle tough industrial environments with a full metal case design and water tight, type 4X, front bezel assembly. Hardware push buttons on the front panel supplement touch screen software buttons for common interface tasks such as user log-off, display last screen and main menu access.

The 900 Control Station is available with either a 10.4 inch or 15 inch display size. Both models are configured using Station Designer PC configuration software.

Communications:

- Modbus/TCP Protocol
- USB Ports: Adhere to USB specification 2.0
- RS232 Serial Ports (RJ12 connectors)
- RS485 Comm. Port (RJ45 connector)
- Ethernet Port: (RJ45 connector)—wired as a NIC (Network Interface Card)
- 10BASE-T/100BASE-TX
- Redundant Networks

### Operator Interface:
- Fully manage HC900 controller function blocks such as PID, setpoint programmers, etc.
- Load/monitor setpoint programs, recipes
- View analog and digital status
- View bar graph groups
- View trends
- View alarm and event status
- Initiate operator push–button actions
- Expandable memory with Flash Memory socket for record keeping & configuration transfer
- Configuration stored in non-volatile memory for secure operation
- Integrate HC900 controller alarms/events or build them into the interface
- Emulator
- Multilingual (5 languages including English, German, French, Spanish and Italian)
- Batch Reporting

---

## Operator Interface

### Model 900CS10-00
- Display
  - Size: 264 mm (10.4 in)
  - Pixels: 640 x 480, Color LCD
- Data Logging
  - Media: Volatile RAM memory, optional non-volatile flash card memory or removable USB memory module, Secure Data Archiving
  - Data Types: Process history, alarms, events, diagnostics, user changes
  - Export format: CSV
- Power Supply
  - +24 VDC ±20% @ 29 W max.
  - Requires Class 2 or SELV rated power supply
  - Front panel LED indication of power on
- Safety
  - UL evaluated to CSA C22.2 No. 61010-1-2004–Second Edition. General; Purpose (Ordinary Location) Safety
  - UL, CSA and FM Class I, Div 2 Groups A,B,C and D – Hazardous (Classified; Location Safety for USA and Canada)
- Operating Temperature
  - Operating Temperature Range: 0 to 50°C (32 to 122°F)
  - Storage Temperature Range: -20 to 70°C (~4 to 158°F)
- Humidity
  - Operating and Storage Humidity: 80% maximum relative humidity (non-condensing) from 0 to 50°C

### Model 900CS15-00
- Display
  - Size: 381 mm (15 in)
  - Pixels: 1024 x 768, Color LCD
- Data Logging
  - Media: Volatile RAM memory, optional non-volatile flash card memory or removable USB memory module, Secure Data Archiving
  - Data Types: Process history, alarms, events, diagnostics, user changes
  - Export format: CSV
- Power Supply
  - +24 VDC ±20% @ 46 W max.
  - Without options
  - Requires Class 2 or SELV rated power supply
  - Front panel LED indication of power on
- Safety
  - UL evaluated to CSA C22.2 No. 61010-1-2004–Second Edition. General Purpose (Ordinary Location) Safety
  - UL, CSA and FM Class I, Div 2 Groups A,B,C and D – Hazardous (Classified); Location Safety for USA and Canada
- Operating Temperature
  - Operating Temperature Range: 0 to 50°C (32 to 122°F)
  - Storage Temperature Range: -20 to 70°C (~4 to 158°F)
- Humidity
  - Operating and Storage Humidity: 80% maximum relative humidity (non-condensing) from 0 to 50°C
Matrikon offers the industry’s most extensive portfolio of OPC and OPC UA connectivity products along with unmatched global domain expertise. Its solutions integrate Honeywell’s products such as the HC900 Controller, MasterLogic PLC, single loop controllers, control systems, actuators and analyzers with third-party SCADA, historians and human machine interfaces (HMIs) to provide secure, reliable open data connectivity.

The following Matrikon products are available with Honeywell products:

**OPC Servers**

The Matrikon provides connectivity to multiple devices, protocols and APIs. Matrikon’s Server offers a wide range of plug-ins to support the most popular PLC and DCS protocols in the market.

- **PLC OPC Servers**
  - Honeywell HC900 OPC Server
  - Modbus Devices
  - Siemens, and more

- **DCS OPC Servers**
  - APACS OPC Server (Direct)
  - Vestas Wind Turbines, and more

**OPC Archiving and Analytics**

Historical data has never been this easy to configure, store, and transfer. Exposing historical data using standards-based OPC HDA enables users to easily “tap-in” to the data flow at any point. Matrikon has the tools you need to store, move, and access historical data.

**OPC Security**

The Matrikon Security Suite provides the essential tools to secure existing OPC architectures. There is no need to replace or disturb any OPC components, regardless of whether they are OPC Security enabled or not. The Matrikon Security Suite is compliant with the OPC Foundation’s OPC Security Specification and provides you with the security you need.
Connectivity Solutions

Matrikon OPC
Secure, reliable open data connectivity

• OPC security Gateway Software
  Provides configurable access to the OPC architectures and full control for the user. Users can control who can browse, add, read or write per tag.

• OPC Tunneller™
  Provides an easy, reliable and secure way to communicate between networked computers. It does away with the headaches typically associated with DCOM configuration.

**OPC Solutions and Architectures**
Matrikon offers a wide variety of OPC solutions and products that solves many market problems to ensure that you receive all your data in secure and reliable manner.

• OPC DMZ Agent
  OPC Hub and Spoke Industry

**OPC Data Management**
Here you’ll find products related to the transfer and conversion of data. Leveraging OPC’s Client/Server model, these communication enablers can be added to most OPC systems to provide additional functionality.

• OPC Tunneller™ Software
  Fastest and secure way to make OPC connections...

• OPC Data Manager
  Share and map data between OPC Servers...

• OPC Redundancy Broker
  Make all your OPC connections redundant...

• OPC Funnel
  Consolidate OPC Servers into a single OPC Gateway...

**Data Connectivity Devices**
Matrikon Industrial and Gateway data connectivity devices provide the ultimate in secure, reliable data visibility into remote parts of the enterprise commonly considered out of reach or overly expensive for traditional PC based OPC solutions.

• Matrikon Industrial Data Logger
  Collects data from assets and control systems, buffers the data locally to ensure zero data loss then forwards that data to a central location for long term archiving.

• Matrikon Industrial UA Modbus Gateway
  Provides a simple and secure method to gain access to data from RTUs, PLCs, or any other devices that use the MODBUS data protocol, well suited for limited power availability in remote conditions.

**OPC Event Management**
Matrikon offers a wide variety of OPC A&E (Alarms and Events) products to store, move, and expose A&E data. Unlike other OPC vendors that provide the bare minimum for data connectivity, Matrikon offers OPC A&E to ensure that you receive all your SOE data.

• OPC Server for A&E
  Create OPC A&E events from real-time OPC values...

• OPC A&E Explorer
  Quickly connect to A&E OPC Server...

• OPC Messenger
  Send email notifications based on the triggered events...

• OPC A&E Historian – Store A&E data from any data source into one repository...

**IIoT / Industry 4.0 Solutions**
OPC UA is recognized as an enabling technology for the IIoT and Industrie 4.0, supporting multi-vendor, multi-platform interoperability for moving data and information from the embedded world to the enterprise. OPC UA extends the capabilities of the Classic OPC model by improving upon security and employing standard Internet technologies.

• OPC UA Proxy: enables classic OPC based client applications to connect with OPC Unified Architecture (UA).

• OPC UA Wrapper: enables users to connect to their COM/DCOM based “OPC Classic” servers using the new OPC UA specification.

• Matrikon Flex Software Development Toolkit (SDK): OPC UA Server SDK scalable across every class of device.
Remote Terminal Unit

ControlEdge RTU2020
Realize the production potential of your oil & gas assets

The Honeywell RTU2020 Remote Terminal Unit (RTU) is a modular, powerful and scalable controller capable of all remote automation & control applications. When combined with Experion® LX and its radically simplified SCADA configuration with superior operator experience, it solves the most challenging remote automation requirements for the oil & gas industry.

With our modern RTU2020 Remote Terminal Unit, you have perfect 20/20 vision to realize the production potential of your oil & gas assets through safe, reliable and efficient remote monitoring, diagnosis and asset management, while ensuring low total cost of ownership.

The Lowest Power Consumption
The RTU2020 has one of the lowest power consumptions on the market at a typical tiny 1.9 Watts, even when using HART. When HART is required, other RTUs require additional hardware, consuming even more power, whereas RTU2020 has HART onboard. Even in tropical and desert environments, either minimal or no cooling is required.

Efficient Wiring and Assembly
RTU2020 comes with removable field terminals, allowing the installer to hold the terminals in their hand for wiring even with gloves on. In addition, the terminals are printed with the I/O type and number giving the installer positive identification. Combined, this saves upfront installation cost and reduces wiring errors.

High Performance RTU with HART enabled Onboard I/O
With a modern dual core 667MHz processor, RTU2020 has the power for today’s applications and spare reserve to meet tomorrow’s needs. Importantly, by having built-in HART, RTU2020 has no requirement for separate expensive and power consuming HART I/O modules or third party components.

Key Features:
• Stand-alone lowest power consumption in its category at a typical 1.9W
• Temperature range -40 to 75°C (-40 to 167°F). Up to 75°C, not 70°C like other units
• High reliability with well designed thermal paths
• HART enabled onboard and expansion I/Os. No extra hardware required. Digital HART data & diagnostics are available locally for use in RTU program & remote alarming
• HART IP allowing remote asset management of HART devices via Honeywell’s Field Device Manager Express
• Efficient wiring & configuration saving installation and maintenance time
• Modern, powerful CPU for now & into the future
• Transient suppression on every I/O channel & every communication
• A powerful IEC 61131-3 programming environment
• Liquids & gas calculations in the same controller
• Flexible communication options for uplink & downlink
• Industry standard protocols of Modbus & DNP3 both as master and slave
• Secure communications with authentication & encryption
• Data logging on board & optionally on local SD card
• Hazardous area certified

The Value of HART
RTU2020 helps eliminate maintenance trips to the field with robust data logging, good sub-system communications with local devices and smart device integration with HART to enable better fault modeling, both direct on the RTUs and at central locations.

Endures Tough Environments
RTU2020 has been designed to withstand the toughest environments, with an operating temperature range of -40 to 75°C in humidity of 5% to 95%. RTU2020 has conformal coating to G3 and is hazardous area certified.

Flexible Communication Ports, Standard Protocols
RTUs need to efficiently manage unreliable, low bandwidth networks and support remote, redundant and master/slave communication scenarios to provide data buffering and history backfill.

Robust Data Logging Ensures Data Availability
RTU2020 comes with data logging capabilities to record values to data files in flash memory or the onboard SD card, (optional), supporting up to a massive 32GB of data. This ensures important data is never lost and is available for future analysis.

Smart ISA100 Wireless Device Integration
RTU2020 comes with an onboard Wireless I/O solution to connect ISA100 wireless devices. These wireless devices appear as native I/O, as if they were hard-wired to the controller. They are programmed and managed with the same configuration tool. So, you benefit from the same smart device capabilities as wired smart devices.

Native Redundancy
Honeywell’s redundancy is ready to go. There is no need to program any differently from a non-redundant controller. RTU2020 takes away the complexity. No additional infrastructure is required to synchronize the data between CPUs and to connect with I/O modules.

HercuLine Electric Actuators

HercuLine Electric Actuators are engineered for exceptional reliability, accurate positioning, and low maintenance. Designed for very precise positioning of dampers and quarter-turn valves, they perform especially well in extremely demanding environments requiring continuous duty, high reliability and low maintenance. With non-contact sensing, the maintenance problems and unexpected shutdowns associated with slidewires and potentiometer wear are eliminated.

HercuLine Smart Actuators

Honeywell’s new actuators incorporate all of the quality and reliability features of the HercuLine actuators with the added benefits of microprocessor-based electronics. These benefits make it easier to install, set up and commission the actuator, while allowing you to monitor the health parameters for proactive maintenance planning.

- RS485/Modbus communications for remote access
- Programmable: Alarm and relay outputs; Characterization, failsafe functions, dead-band, and filtering; Direction of rotation
- Diagnostic Parameters: Maximum Hi and Lo temperature; Stall and accumulated stall time; Total travel

HercuLine PC Software

- Lowers ownership cost
- Use your PC for calibration, configuration and maintenance data
- Eliminates local display and keypad
Lifecycle Support

Global Services and Support
Streamline startup and optimize your automation investment

Global Service and Support Team
Count on Honeywell to help you streamline startup and optimize the lifecycle of your automation investment. Honeywell’s global service and support team will help you maximize the return on your technology investment through personalized service and assistance throughout the life of your installation.

- Achieve faster and smoother startups
- Reduce engineering, procurement, installation and commissioning costs by at least 10%
- Maintain continuity despite any turnover in your organization’s personnel
- Maximize payback from your asset investments
- Avoid unplanned downtime

Service Professionals
Our service professionals are experts in their field and have the necessary global certifications to safely install and maintain customers’ equipment.

We offer the following services at each lifecycle stage:

Before Installation
- Site survey
- Consulting
- Project planning
- Function design specification
- Product selection

During Installation
- Hardware/Software supply
- Supervision of installation
- Specific application development
- System configuration and integration

After Installation
- Commissioning
- Acceptance testing
- Training
- System optimization
- Remote and onsite service programs, extended warranty, help desk and emergency support

The result is streamlined startup operations and optimized safety, reliability, efficiency and sustainability through the life of the equipment.
Versatile and Modular Field Products

Scan this QR Code to see how Honeywell’s portfolio of field measurement and control products enable you to manage your plant assets and optimize your entire enterprise with solutions that are easy to configure, operate and maintain.
